

ILLUMINATI'S NEXT BOMBSHELL

HITS IN MAY...

WALLST→**DAILY**

by J.W. LANGFORD, Senior Analyst

The Illuminati — A Secret Society That Controls the World and its Best Moneymaking Opportunities

This might come as a shock to you. Then again, it might not. But it's nevertheless true...

Every consequential wealth event since the end of the Great Recession was orchestrated by a powerful, secretive few.

From the corridors of Capitol Hill to the boardrooms of Wall Street, this secret society has been lurking in the shadows, pulling the strings and levers of power in the financial markets.

Who are these masterminds and financial wizards? And how can we be so sure they exist?

While their identities remain well guarded, the evidence of their handiwork is everywhere.

Look no further than Bitcoins.

How does an unregulated cryptocurrency – with no inherent value – burst onto the international scene and embark on an epic and dizzying sprint thousands of percent higher?

I'll tell you how – it's the Illuminati.

That's right. The secret society founded centuries ago is still alive and well. Heck, our research indicates that today's Illuminati wield more power and capital than ever before.

And there's no doubt that they're behind the Bitcoin craze.

They recognized that the fiscal and political climate was perfectly suited to orchestrate such a rapid run-up. Moreover, they possessed the influence and capital to facilitate the charge!

The end result? They multiplied their untold wealth and power even more.

World governments are still reeling, trying to figure out what just happened with Bitcoins. The Chinese government went as far as blocking new transactions in hopes of buying time to get to the bottom of the situation.

Meanwhile, the Illuminati are moving on to the next wealth-exploding coup.

Our research indicates that their next bombshell investment could hit as early as February. But before we tell you what it is, a little background is in order...

TRACKING THE ILLUMINATI'S NEXT MOVE

For years now, we've made it our job at *Wall Street Daily* to track strange patterns in capital flows throughout the market.

Why? Because a sudden explosion of interest and investment in an under-the-radar, misunderstood, or neglected sector is the surest sign that the Illuminati are on the move again.

The trick is recognizing the subtle shifts early and pouncing on them.

That's precisely what we did with one of the Illuminati's previous targets – 3-D printing.

You don't need me to tell you that 3-D printing is all the rage these days. Investors are falling all over themselves to get a piece of the action.

World governments are still reeling, trying to figure out what just happened with Bitcoins. The Chinese government went as far as blocking new transactions in hopes of buying time to get to the bottom of the situation.

CRASH WALL STREET'S NEXT IPO BONANZA

All eyes are on Silicon Valley's latest "crown jewel." This tech startup's IPO is rumored to fetch a \$9-billion payday. But here's the thing: We've uncovered a way for you to get in at pre-IPO prices. Forget Wall Street... [here's everything you need to know.](#)

FIND OUT MORE >>

Case in point: They're throwing gobs of money at *private* 3-D printing companies via crowdfunding platforms.

Take Formlabs, for example. In just three hours, it surpassed its \$100,000 fundraising goal on Kickstarter. And within two days, it had raised over \$1 million.

What's worse? Clueless Wall Street analysts are leading the lambs to the slaughter with their increasingly bold predictions:

- "3-D printing is the next \$1-trillion industry," they say.
- "We're on the cusp of the next industrial revolution," they proclaim.
- "It will be bigger than the web," says Chris Anderson, former Editor-in-Chief of *Wired* magazine.
- 3-D printing is literally going to "change the world," MakerBot CEO, Bre Pettis, told our analysts at the Consumer Electronics Show.

Whew! Let's calm down a bit and get some perspective here...

TOO BAD WE CAN'T PRINT SOME REALISM!

Now, I'll be the first to concede that 3-D printing, which involves converting digital files into actual three-dimensional objects, is a truly disruptive technology.

And it could change the face of manufacturing. *Eventually.*

But let's be clear... No industry vaults from zero to \$1 trillion overnight like some analysts want us to believe.

In fact, it's taken 3-D printing almost *30 years* just to get to this point. **3D Systems Corp.** (DDD)

filed the first patent in the space (U.S. Patent #4,575,330) in 1986.

So, if it's not going to be a trillion-dollar industry *next* year, how can we explain the fact that 3D Systems' stock went from trading for less than \$3 in early 2009 to over \$90 in the past year? (That's a 2,900% explosion.)

It's the Illuminati.

Years ago, they started quietly, but aggressively, piling into the sector.

They recognized that the technology was ripe for disruption.

They recognized that the potential for it would whip investors into a bidding frenzy.

In other words, it was the perfect opportunity to orchestrate another wealth-exploding coup. And they pounced!

As soon as I noticed it, I alerted our subscribers, saying, "A potent tandem of game-changing technology and off-the-charts growth makes this one of the strongest 'Buys' we've ever seen."

It only took a few months for us to double our money, right alongside the Illuminati. And then we doubled it again.

That's when everyday investors (i.e., the "dumb" money) started noticing.

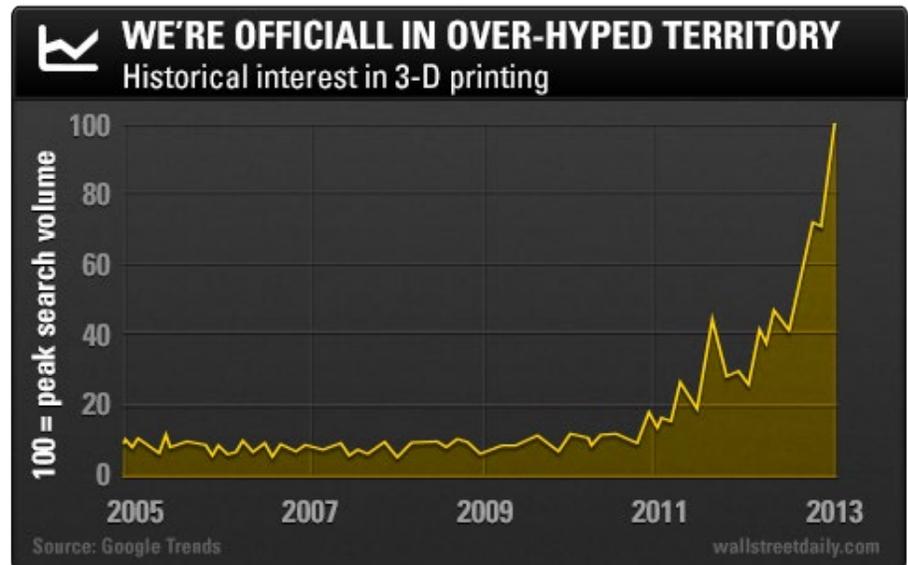

The evidence of their "awakening" is plain as day, too. All we have to do is look at their internet search activity.

As you can see, total web searches and news headlines for 3-D printing started going ballistic in 2011 – two years *after* the Illuminati made their first moves into the sector.

Fast forward to today, and public interest in 3-D printing rests at fever-pitch levels.

When this happens, though, it's a telltale sign that the wealth coup has run its course.

That is, once the "dumb" money figures it out, the Illuminati are long gone – like a thief in the night – scoping out the next opportunity.

IT HAPPENED WITH 3-D PRINTING... AND GOLD... AND BITCOINS

Before 3-D printing, the Illuminati targeted gold bullion. The exact same pattern played out...

Sudden massive inflows of capital... rapidly rising prices... rampant search activity.

And by the time the masses piled in, the Illuminati were on to the next coup – Bitcoins.

I'm here to tell you that Bitcoins are running their course, too.

Ever since the Federal Reserve embarked on its easy money campaign, everyone and their mother have been on a crusade for an alternative reserve currency.

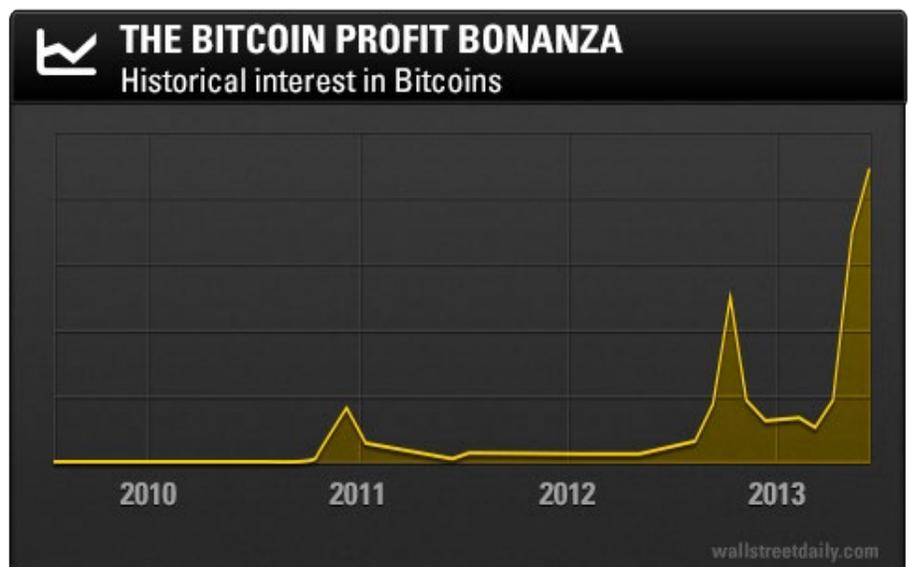

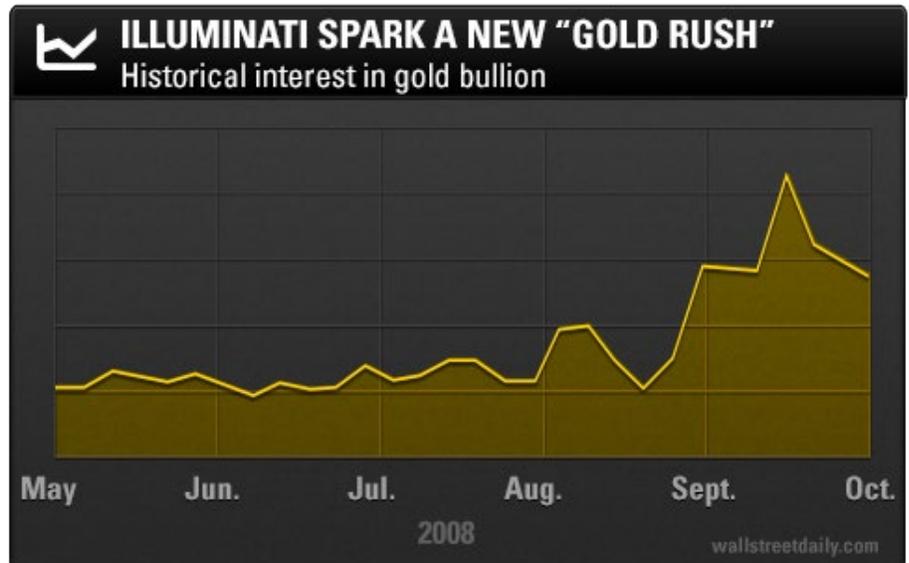

The battle cry? Stop devaluing our money!

Several years ago, the euro was the top answer to the currency woes. Then the eurozone imploded. Game over.

China's yuan entered as the next great contender. But let's be real. We have a better chance of seeing Jesus tomorrow than we do of seeing the world embrace the currency of a communist government as the new reserve.

Even if the Chinese government finally decides to allow its currency to freely float – rather than controlling its value within predetermined ranges – it's still not going to happen.

Of course, during the world's

desperate search, the Federal Reserve just continued printing more money. That only intensified the desire for an alternative.

The desire was so intense, it was palpable. Sure enough, the Illuminati sensed it – and, in turn, exploited it by manipulating the world into believing Bitcoins were the answer.

As the “dumb” money is now finding out, though, Bitcoins are anything but the perfect alternative currency.

Prices are collapsing – and the Illuminati are laughing (all the way to the bank) again – as the rest of the world wakes up to the three biggest pitfalls of Bitcoins (see the last page for more information).

None of these pitfalls matter, of course. The Illuminati have already scored windfall profits on Bitcoins – multiplied their wealth yet again – and moved on.

The telltale sign? Again, internet search activity. The “dumb” money can’t get enough of Bitcoins lately.

Like I said before, once the “dumb” money figures it out, the Illuminati are already long gone – like a thief in the night – scoping out the next opportunity.

Here’s the thing – our sources reveal that the Illuminati have already honed in on the next wealth-exploding opportunity.

We’re noticing strange patterns in capital flows into a completely obscure, but revolutionary, technology. One that promises to transform the way humans interact with their surroundings.

As you’ll see in a moment, it’s an opportunity that’s perfectly suited to the super-secretive Illuminati...

THE FUTURE OF THE WORLD

Enter smart dust.

When you first hear the words, you might think of something magical. But smart dust is actually a system of tiny microelectromechanical systems (MEMS), robots or other devices that can detect everything around them – light, temperature, vibrations, pressure, magnetism, chemical composition, humidity, location, acceleration... The list goes on.

Smart dust particles are referred to as “notes.” And they can be as tiny as regular dust particles

**Emerging
crypto-currency set
to explode – and
it’s not bitcoin!**

Already hundreds of America’s top retailers are accepting it as payment. Unlike bitcoin, and even the U.S. dollar – this currency is backed by real, tangible assets. But you must get in early to capture maximum gains. [Immediate details here](#)

and can spread throughout the air to collect and monitor data.

As tech research firm Gartner explains, notes “are generally aimed at monitoring real-world phenomena without disturbing the original process. They are so small and light that they can remain suspended in the environment like an ordinary dust particle. Air currents can also move them in the direction of flow and, once they are deployed, it is very hard to detect their presence and even harder to get rid of them.”

Applications for smart dust abound across almost every industry – from medicine to agriculture to communication.

For instance, smart dust can alert soldiers to poisons in the air, track soil moisture in agricultural settings, and even enter human bodies to check for physiological problems.

Much like 3-D printing, the technology has been around for decades. In fact, the concept for smart dust came out of a study convened by the United States Defense Advanced Research Projects Agency (DARPA) and the Research and Development Corporation (RAND) in the early 1990s.

The technology’s development has progressed so much, however, that before long, smart dust will be in every building, road and home to monitor energy usage, manage traffic, detect earthquakes, provide security and collect any type of meaningful data you can imagine.

One leading tech giant, for instance, plans to deploy over one trillion smart dust sensors across the planet to map out the “central nervous system” of the Earth, if you will.

In all aspects, this is virtually the perfect opportunity for the Illuminati.

Much like them, smart dust is a technology that’s almost imperceptible, fast moving and all knowing. And sure enough, our research indicates that they’ve been deploying fresh capital in the sector.

So what’s the best way to play it? It’s simple, really.

Remember, the trick to profiting alongside the Illuminati is recognizing their subtle shifts of capital early – and joining.

One leading tech giant, for instance, plans to deploy over one trillion smart dust sensors across the planet to map out the “central nervous system” of the Earth, if you will.

So all we have to do is scoop up shares of the leading innovators in the smart dust sector.

We've already cornered three such companies that promise to deliver explosive, Illuminati-driven gains in the months ahead.

Once the "dumb" money wakes up to the technology, and the next opportunity masterminded by the Illuminati, these are the names that they're going to pile into. Just like they did with 3-D printing and 3D Systems.

At that point, we'll look to book our profits and move on.

Stay tuned!

Ahead of the tape,

J.W. LANGFORD

Senior Analyst, *Wall Street Daily*

Wall Street Pickpockets Raid Bitcoin Wallets.

Bitcoin is off 66% from its high of \$1,145 just one year ago. Since then, high-profile robberies, bankruptcies, and abandoned mining operations have left it in a precarious state. Meanwhile, Wall Street has begun quietly amassing positions alongside this rival currency. And we've found the *only* way in.

[DETAILS HERE ▶](#)

THREE FATAL BITCOIN PITFALLS

Bitcoin Pitfall #1: In ~~God~~ Nobody We Trust

No doubt, the atheists who cringe over the fact that U.S. paper money says “In God We Trust” love the fact that Bitcoins pledge no such allegiance.

In fact, many supporters of the digital currency tout the lack of *any* centralization or regulation over Bitcoin as a key selling point. But without regulation, and the guidelines and legal protections that come with it, consumers have no reason to trust the currency.

And if we can't put our trust in a currency, we won't use it. Simple as that.

Besides, if you think governments around the world are going to sit on the sidelines and allow an unregulated, digital currency to gain momentum, you're crazy.

The U.S. Department of Homeland Security has already dropped the hammer on Mt. Gox, the world's largest Bitcoin exchange, for operating a money-transmitting business without a license. And that's only a preview of what's to come.

So this whole notion of an unregulated currency is really just a pipe dream. While citizens might want it, world governments won't allow it.

Bitcoin Pitfall #2: No Guarantees

In addition to lacking trust, we have no guarantee that Bitcoins are safe *and* secure. Bitcoin exchanges have already been hacked *and* stolen.

We also have no guarantee that Bitcoin won't be replaced. I mean, what's going to stop a *better* Bitcoin from coming onto the scene?

Nothing. Truth be told, there are actually five digital currency offshoots in existence, collectively referred to as “altcoins,” aimed to fix inefficiencies in the market – Litecoin, Peercoin, Freicoin, Ripple and the Linden Dollar.

Bitcoin Pitfall #3: No Inherent Value

Haters continually deride the U.S. dollar because it's not backed by anything of value.

What's the difference with Bitcoin?

Just like there's no inherent value in paper, there's no inherent value in a bunch of ones and zeros in cyberspace.

That means there's no way to figure out what a fair price is for a Bitcoin. And that's ultimately the digital currency's undoing. It's nothing more than a (wild) speculation.

I mean, would you be willing to accept your next paycheck in Bitcoins? Yeah, I didn't think so.
